

APPARATUS AND METHOD FOR CLEANING A MACHINE TOOL

Abstract

An apparatus and a method for dislodging contaminants from a surface of a machine tool. A machine tool has a spindle and a housing disposed around the spindle. The apparatus includes a support plate, an arbor, and a cleaning member. The arbor is disposed on the support plate and is adapted to be attached to the spindle. The cleaning member is disposed on and extends from the support plate. The cleaning member contacts a surface of the machine tool to remove contaminants.
